The migration process can be divided into 4 major steps: diffusion of chemical compounds through the polymers, desorption of the diffused molecules from the polymer surface, sorption of the compounds at the plastic–food interface, and desorption of the compounds in the food (Ferrara and others 2001). The mass diffusion process is usually governed by Fick's law.

3.1) Additives Make Plastics Easier To Process. Making things out of plastics is like playing a game with molecules. The aim is to re-organise them into new shapes without their changing colour, sticking to the mould, or doing anything that could spoil the finished article. Additives help with all these problems.
