Meiosis is the type of cell division that is seen during the formation of gametes (sex cells). It consists of two successive divisions which are meiosis 1 and meiosis 2. In meiosis 1, the number of chromosomes is reduced by one-half and for this reason, it is called reduction division.

So this is all meiosis, meiosis I here, and you can see each of these cells now have a haploid number. They now have a haploid, haploid number of two chromosomes each. Now each of those two chromosomes do have two sister chromatids, and as we'll see in meiosis II, which is very similar to mitosis, is going to split up the sister chromatids
