Evaluating Tmj Injuries Personal Injury

The TMJ or jaw joint is the joint immediately in front of the ears. Although this joint is frequently injured these TMJ injuries are often misdiagnosed and have only recently received widespread attention. The temporomandibular joint is unique in that this joint dislocates itself within its ball and socket arrangement so the jaw can fully open. This intricate arrangement lends the TMJ susceptible to injury during traumatic episodes such as rear-end collisions involving cervical whiplash and ...
