(This introduction is not part of IEEE P1434, IEEE Guide to the Measurement of Partial Discharges in AC Electric Machinery.) Partial discharge (PD) measurements have been made on the windings of ac electric machinery for over 40 years. The electrical insulation of these windings may be prone to PD activity as a result of internal

Partial Discharge Measurements: Earlier the testing of insulators and other equipment was based on the insulation resistance measurements, dissipation factor measurements and breakdown tests. It was observed that the

Another one-second test checks for partial discharge (PD) at 1.6 times rated voltage; the level of partial discharge must be $<5\text{pC}$ (5×10^{-12} Coulombs). The 1.6 multiplier takes into

Partial Discharges in Electrical Insulation

Partial Discharge can be described as an electrical pulse or discharge in a gas-
