Plant breeding can be accomplished through many different techniques ranging from simply selecting plants with desirable characteristics for propagation, to more complex molecular techniques Plant breeding has been practiced for thousands of years, since near the beginning of human civilization.

Principles of Plant Breeding - AgriMoon

Plant breeding is an ancient activity, dating to the very beginnings of agriculture. Probably soon after the earliest domestications of cereal grains, humans began to recognize degrees of excellence among the plants in their fields and saved seed from the best for planting new crops.

Plant breeding and climate changes | The Journal of ...

As ancient as agriculture itself, plant breeding is one of civilization's oldest activities. Today, world food production is more dependent than ever on the successful cultivation of only a handful of major crops, while continuing advances in agriculture rely on successfully breeding new varieties that are well-adapted to their human-influenced ecological circumstances.

The genetic diversity of European species of Miscanthus was analyzed by AFLP technique. The genetic similarity based on six primer combinations yielded about 200 data points. The plant material included 11 clones of *M. sinensis*, 2 clones of *M. sacchariflorus* and 31 accessions of *M. x giganteus*. Furthermore 4 hybrids were created by crossing *M. sinensis* with *M. sacchariflorus* clones.
