A lattice is an abstract structure studied in the mathematical subdisciplines of order theory and abstract algebra. It consists of a partially ordered set in which every two elements have a unique supremum (also called a least upper bound or join) and a unique infimum (also called a greatest lower bound or meet). An example is given by the natural numbers, partially ordered by divisibility, for ...

In the branch of mathematics known as order theory, a semimodular lattice, is a lattice that satisfies the following condition: . Semimodular law  $a \wedge b <: a$  implies  $b <: a \vee b$ .. The notation  $a <: b$  means that  $b$  covers  $a$ , i.e.  $a < b$  and there is no element  $c$  such that  $a < c < b$ .. An atomistic (hence algebraic) semimodular bounded lattice is called a matroid lattice because such lattices are ...
