The yield strength of the material is commonly chosen as the strength limit to which the calculated stresses are compared. The factor of safety , FS , is calculated as: where  $\sigma$  actual is the calculated stress in the structure, and  $\sigma$  limit is a maximum stress limit, typically a material strength such as the yield strength (  $S_{ty}$  ).

Strength of materials, also called mechanics of materials, deals with the behavior of solid objects subject to stresses and strains. The complete theory began with the consideration of the behavior of one and two dimensional members of structures, whose states of stress can be approximated as two dimensional, and was then generalized to three dimensions to develop a more complete theory of the ...

Mechanics of materials is a branch of mechanics that studies the internal effects of stress and strain in a solid body that is subjected to an external loading. Stress is associated with the strength of the material from which the body is made, while strain is a measure of the deformation of the body.
